Scientific Topic: Agreement Forests

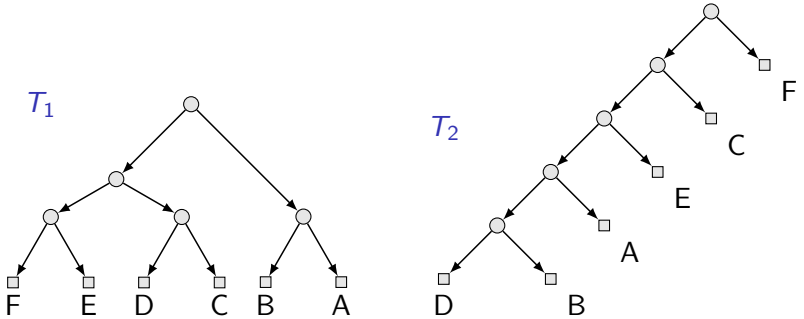
Definition

- A phylogenetic tree is a rooted, bijectively leaf-labelled out-branching.

Scientific Topic: Agreement Forests

Definition

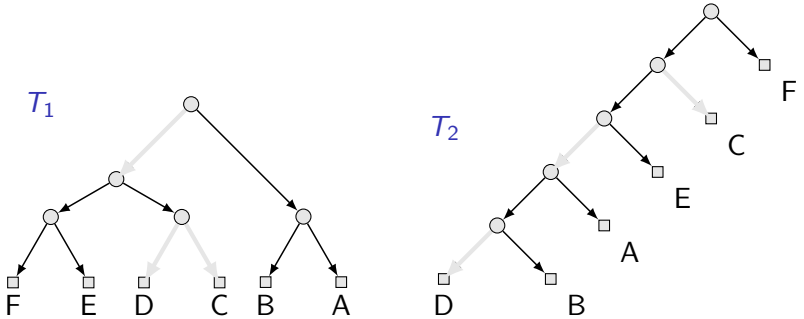
- A phylogenetic tree is a rooted, bijectively leaf-labelled out-branching.
- An agreement forest of t phylogenetic trees $T_1, T_2, \ldots, T_t$ is any forest of phylogenetic trees that can be obtained from each T_i by removing directed edges (+"cleanup")



Scientific Topic: Agreement Forests

Definition

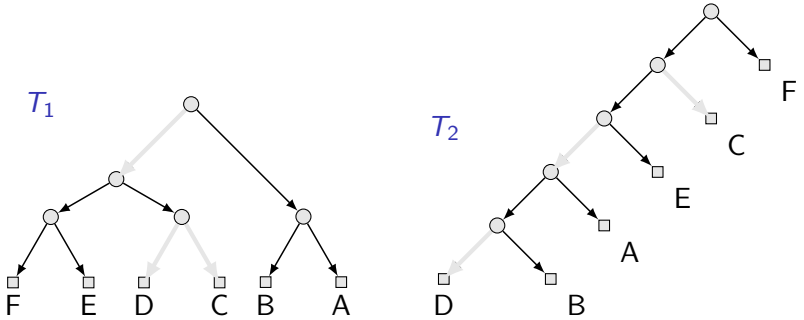
- A phylogenetic tree is a rooted, bijectively leaf-labelled out-branching.
- An agreement forest of t phylogenetic trees $T_1, T_2, \ldots, T_t$ is any forest of phylogenetic trees that can be obtained from each T_i by removing directed edges (+"cleanup")



Scientific Topic: Agreement Forests

Definition

- A phylogenetic tree is a rooted, bijectively leaf-labelled out-branching.
- An agreement forest of t phylogenetic trees $T_1, T_2, \ldots, T_t$ is any forest of phylogenetic trees that can be obtained from each T_i by removing directed edges (+"cleanup")
- The number of phylogenetic trees in an agreement forest F is called its size. If F has minimum size (maximizes the agreement), it is called a maximum-agreement forest.



Scientific Topic: Agreement Forests

- A phylogenetic tree is a rooted, bijectively leaf-labelled out-branching.
- An agreement forest of t phylogenetic trees $T_1, T_2, \ldots, T_t$ is any forest of phylogenetic trees that can be obtained from each T_i by removing directed edges (+"cleanup")
- The number of phylogenetic trees in an agreement forest F is called its size. If F has minimum size (maximizes the agreement), it is called a maximum-agreement forest.

Results for $t = 2$, $\mathrm{MAF}(T, T') = k$

- NP-hard — Bordewich & Semple, '04
- $O(2.35^k n)$ time — Chen & Wang, '13
  ($O(2^k n)$ time claimed) — Whidden, '13
- problem kernel with $28k$ taxa — Bordewich & Semple, '05

Note: No other parameterization explored!

Organization and Data

Exact/Parameterized Track

- t trees
- **idea**: instances accompanied by parameters
  (with proof, e.g. decomposition)
- committee takes requests for parameters in the first months
- parameter statistics of hidden instances available in advance

Organization and Data

Exact/Parameterized Track

- t trees
- **idea**: instances accompanied by parameters
  (with proof, e.g. decomposition)
- committee takes requests for parameters in the first months
- parameter statistics of hidden instances available in advance

Heuristic Track

- 2 trees
- as usual

Organization and Data

Exact/Parameterized Track

- **idea**: instances accompanied by parameters
  (with proof, e.g. decomposition)
- committee takes requests for parameters in the first months
- parameter statistics of hidden instances available in advance

Heuristic Track

- 2 trees
- as usual

Lower Bound Track

- 2 trees
- **idea**: score depends on quality and runtime
- **idea**: reach approximation as fast as possible

Organization and Data

- t trees
- **idea**: instances accompanied by parameters
  (with proof, e.g. decomposition)
- committee takes requests for parameters in the first months
- parameter statistics of hidden instances available in advance

Heuristic Track

- 2 trees
- as usual

Lower Bound Track

- 2 trees
- **idea**: score depends on quality and runtime
- **idea**: reach approximation as fast as possible

Real-World Data

expect few trees, small MAF, many leaves

Lower Bound Track

- 2 trees
- **idea**: score depends on quality and runtime
- **idea**: reach approximation as fast as possible

Real-World Data

expect few trees, small MAF, many leaves

Generated Data

expect many trees, large MAF, many leaves

Timeline

mostly follows previous PACE-instances

September '25	Announcement of the challenge and tracks
October '25	Definition of input and output formats
November '25	Tiny test set and verifier are provided
January '26	Release of public instances and details about the benchmark
April '26	Submission via optil.io opens
July '26	Final submission deadline and results
